Nawabshah (SBA), Pakistan

Skills

- Rest APIs
- Backend development
- Json data handling
- System Automation
- Git & GitHub
- VScode/Antigravity
- Debugging & development tools
- Google doc/ MS
- Clearing, Transfer, PO, CDR

Languages

- English
- Urdu
- Sindhi

Summary

AI student and backend developer with practical experience in building intelligent systems and automation-based applications. Skilled in Python, APIs, and software development fundamentals with multiple hands-on projects in AI and desktop automation. Passionate about designing efficient, real-world solutions and continuously expanding expertise in artificial intelligence, backend systems, and scalable application development.

Experience

Self-Directed Learning & Development

2024 – Present

- Designed and developed multiple AI-based and automation projects using Python, APIs, and system integration.
- Built a **desktop AI assistant (Jarvis Desktop Assistant)** capable of executing system commands, responding to user input, and automating daily tasks.
- Developed **Code Buddy**, a developer productivity assistant focused on solving programming problems and improving workflow efficiency.
- Worked with REST APIs and AI integration techniques to enhance application intelligence and responsiveness.
- Strengthened backend development skills through hands-on practice in Python, Java, and JSON-based data handling.
- Continuously improving problem-solving, debugging, and software architecture skills through real-world project building.

Education

- **Institution:** Quaid-e-Awam university of engineering sciences & technology Nawabshah
- **Degree:** Bachelors in Artificial Intelligence
- **Current:** 2nd year, 2nd semester

Achievements

- Completed multiple AI and Data Science certifications from HP LIFE & Google
- Built and deployed real-world AI-based projects using Python and APIs
- Developed personal AI assistant and developer productivity tools
